

AI – Seeing Through the Hype

Dr Samuel Ball

8th June 2026

What is this about?

Everyone's talking about AI, and there are a lot of companies selling AI products to local trusts.

But how can we ask the right questions to see through the hype and know what's *really* happening?

The Website

<http://stmball.uk/ai-hype>

Ask Yourself... (10 mins)

- Does this look like a trustworthy company?
- What are some of the important details for you about the company?
- How do you feel about some of the metrics?

The Data Scientist

Username: data_scientist
Password: retina123

The Data Scientist – Discussion

- Why would claiming a high accuracy on a “clean” dataset be misleading?
- Data Augmentation is commonly used for training – but why might the number of *real* images be an issue?
- Why is contamination of the testing set dangerous?
- Do we trust the evaluation of the product now?

The Data Engineer

Username: data_engineer
Password: pipeline123

The Data Engineer – Discussion

- Why is moving this kind of data via unencrypted means dangerous?
- Why is leaving data on public servers an issue?
- Why is model versioning important?
- Do we trust the data security now?

The Ethics Expert

Username: legal_and_ethics
Password: fairview123

The Ethics Expert – Discussion

- What is the issue with bias in the training set from an ethics perspective?
- What is the problem with legal responsibility?
- What about the sale of data for training processes?
- Does the departure of researchers affect your view of the company?

Thanks for Taking Part!
